

Installation instructions

Congratulations on your Force Energy box, please read the instructions below carefully.

- Do not install the cabinet under the hood or close to the exhaust system or other heat source.
- Do not connect the auxiliary battery (auxiliary battery) to ground or chassis point.
- Do not switch between 12V and 24V while winching.
- In the 12V position, the auxiliary battery is topped up by the vehicle's alternator.

The Force Energy box is connected between your existing vehicle battery and a second auxiliary battery. The auxiliary battery should not be grounded or connected to anything else, just the two heavy cables from the Force Energy Box.
